**“Ermaksan is a global technology company that offers innovative solutions to industrial life.”**

## Who are we ?

Ermaksan produces innovative, high-quality, and high value-added products and solutions with its brands. In its journey exceeding half a century, it has been taking determined steps towards the future by maintaining its strong stance in the fields of sheet metal processing, additive manufacturing, optoelectronics, and advanced defence technologies.

Continuing its investments on the path of sustainable growth without slowing down, Ermaksan contributes to efficient production in more than 120 countries through ERMAKUSA in the USA, ERMAK Deutschland GmbH in Germany and its various other distinguished dealers around the world. In order to meet the customer expectations of today's rapidly changing world and to offer the manufacturing technologies of the future today, the company produced Turkey's first metal 3D printer with the brand ERMAKSAN ADDITIVE and offered it to the additive manufacturing industry. EON PHOTONICS brand, which has Turkey's first private sector semiconductor Optoelectronic R&D centre, continues its production and development activities of high-tech products such as laser technologies, FBG sensors, CNC controllers, and Industry 4.0 applications.

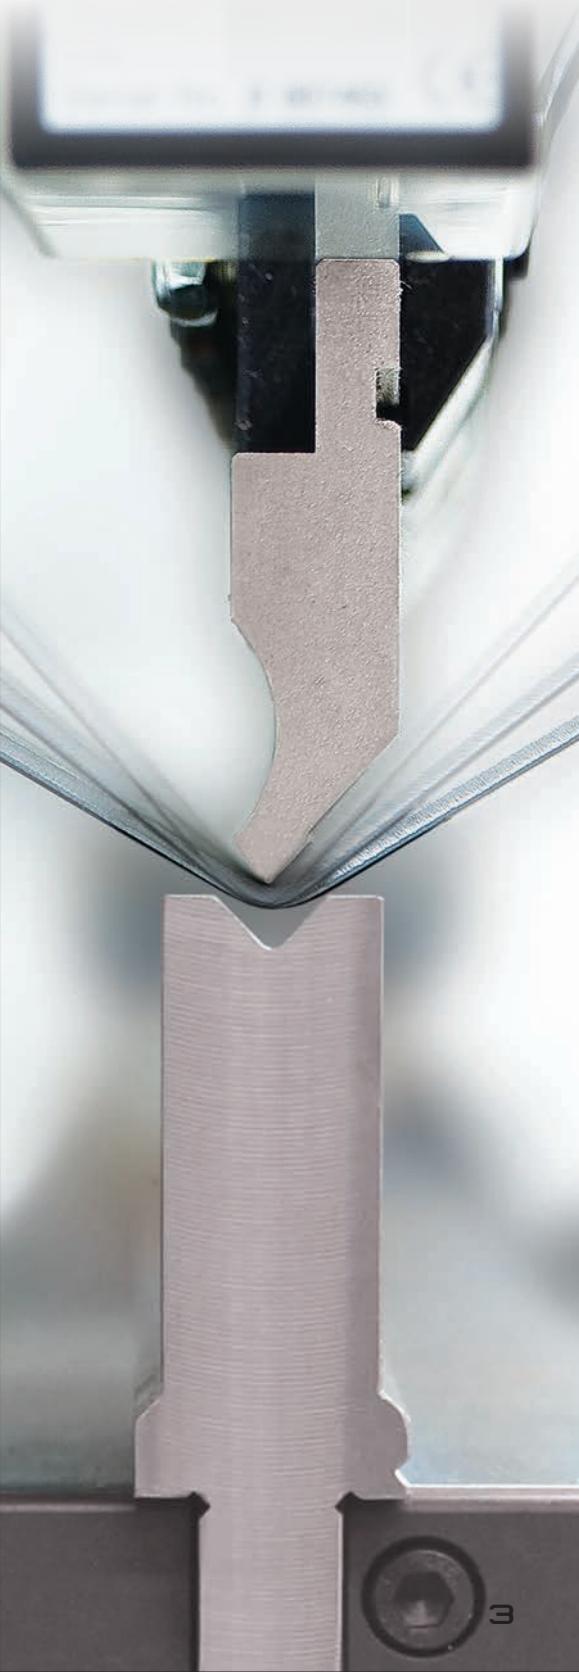

With the innovative perspective of 21th century, Ermaksan continues its activities with the aim of being among the world's leading manufacturers in the fields of technology and R&D. By constantly monitoring new trends and customer expectations, Ermaksan designs and manufactures advanced technology, high value-added, environmentally friendly and energy-saving machines, and takes firm steps towards a more sustainable future by using resources effectively and efficiently.

## Press Brake Technologies

Ermaksan press brakes are made of high-strength monoblock st44 quality steel and have a rigid structure that has been relieved of tension with the latest technology. Thus, their longevity is ensured. Thanks to the hardened and ground dies capable of precision bending, it is resistant to harsh conditions.

While being user-friendly with both standard and optional hardware features, Ermaksan press brakes make your investments profitable with the economic power they add to your business.

Press brakes manufactured by Ermaksan's expert engineers using advanced technologies have been contributing to high-quality and efficient production all over the world for years. Along with the dynamics of digital transformation, we offer tailor-made solutions to our customers, make production more flexible and efficient, and offer the optimum solutions. Thus, we feel the proud of contributing to smart production processes in the fourth industrial revolution.

## FX SERVO

Servo-Electric  
Press Brake

Standard 6 axes  
Y1, Y2, X, R, Z1, Z2

40 - 65 - 80 - 100 ton  
capacity options

1,6 - 2,1 - 2,6 - 3,1m  
length options

Body guard light  
curtain

98 % energy saving  
in standby

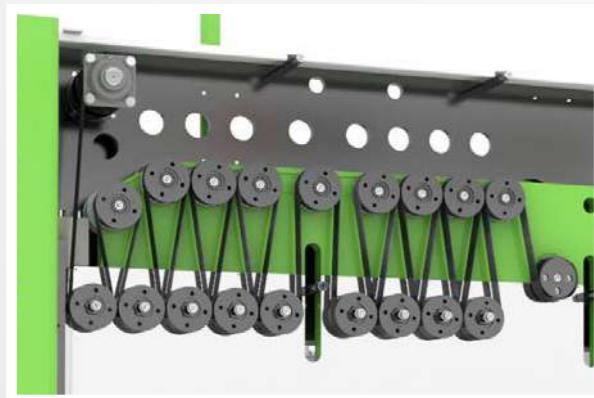

ER99, Delem  
66T

## Environmental Technology

Green Press FX Servo press brake, one of our green press group machines with its quiet operation and low energy consumption features, consumes approximately 69% less energy than hydraulic press brakes.

The machine does not require hydraulic oil to operate. The maintenance cost is minimal since there are no hydraulic system components such as hydraulic filters and sealing elements. In addition, it does not cause the problem of contamination of the working environment due to oil leakage.

The sheet metal can be easily controlled from the front by the operator with the sensitive carriage and the sliding front support arms that can move left and right on the rail. Moreover, the lengths of the pieces can be measured thanks to the rulers mounted on the front support arms. The sheet metal can be fixed from the front with the help of the latch mounted inside the T channel.

### QUIET OPERATION

The beam's downwards and return movements are ensured by means of springs. Thus, the machine works silently and does not create any noise pollution that may disturb the environment.

### LOW MAINTENANCE COST

Hydraulic system and cylinders are not used in the machine. Since it is a completely mechanical machine, you can use it with less maintenance cost.

### ENVIRONMENTALLY FRIENDLY

Since a servo motor with high energy efficiency is used in the machine, which does not require industrial oil, it is an environmentally friendly machine, standing out with its high power and low energy consumption.

### UNLIMITED FULL LENGTH BENDING

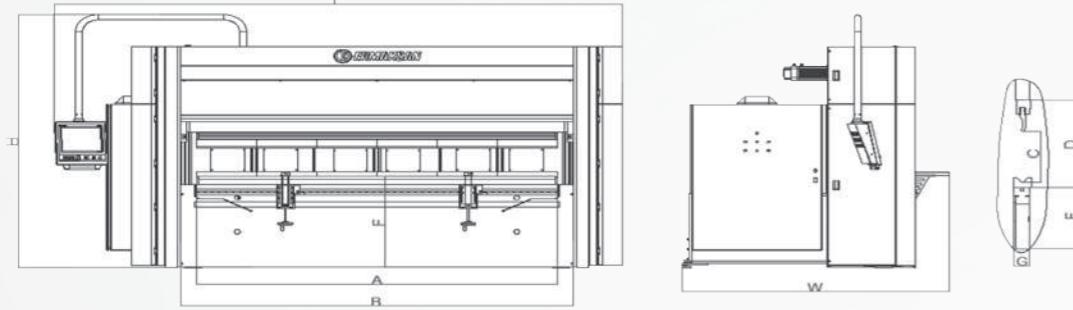

Contrary to the known press brake, this machine does not have a throat. Performs full-length bends between the feet. It has no restrictions according to the hydraulic press.

### LOW ENERGY CONSUMPTION

An energy efficient servo motor is used. Motors do not operate when the upper beam is not moving. It provides an energy saving of 69%.

### RIGID CONSTRUCTION

It has a strong body with dynamic and static rigidity processed with high precision.

STANDARD EQUIPMENT	OPTIONAL EQUIPMENT
• Standard machine sizes; 1600, 2100, 2600, 3100 mm	• Optional daylight
• Standard machine powers; 40, 65, 80, 100 tons	• Single axis, 2 axis, 6 axis backgauge options
• Machine stroke 300mm	• WILA NSCL type top tool holder options
• Daylight 590mm	• WILA NSCR type bottom tool holder options
• No need for crowning	• Motorized crowning
• Standard 4 axis backgauge. X: 800 mm, R: 250 mm, Z1, Z2	• LED-bar bending guide system
• Control units; ER TOUCH 15, ER99, DELEM 66T	• AKAS Laser front protection
• HEIDENHAIN linear scales	• DSP Laser front protection
• Electrical panel designed and manufactured from SIEMENS	• AP3 + AP4 sheet support system
electrical and automation products in accordance with the CE regulations	• Rear sheet support system
• ERMAKSAN Promecam top tool holder	• Optional control panel arm
• ROLLERI PS.135-85-R08 top tool	• Control units; ER TOUCH 21
• ROLLERI M460-R bottom tool	Delem 69T, Cybelec Modeva 19T
• ERMAKSAN bottom tool holder	
• WILA OB-I-MC-TY/UPB mechanical bottom tool clamping system	
• Sliding front support arms with T slot and mm/inch scale	
• LEUZE MLC 100 front safety system	
• Rear sliding cover + switch safety system	
• Side cover + switch safety system	
• LED-light enclosures	

# EVO III

Hybrid Press Brake

Large throat  
depth - 410  
mm

High stroke (275)  
and daylight (550)

2.6 - 4.1m length  
options

Very high speed cycle  
(200 - 10 - 190)

100 - 260 ton  
capacity options

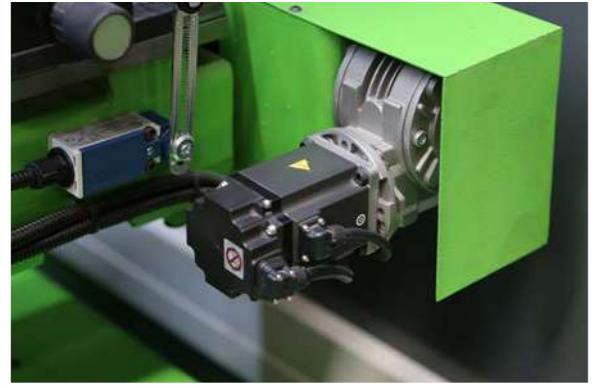

Std. 6 axes - Y1,  
Y2, X, R, Z1, Z2

## Next Generation Technology...

While manufacturers turn to machines with low energy consumption in order to lower their operating profits, they also shape their production with social responsibility awareness such as environmental awareness and effective use of energy resources. In order to meet these expectations of our customers, we have combined our press brake production experience of more than 30 years with today's most advanced technologies, and we have offered the next generation EVO III series hybrid press brakes to the benefit of the sector.

The EVO III series, which has a length of 4.1 meters and a capacity of up to 260 tons, offers its users the opportunity to perform difficult bends under high stroke. 6-axis and motorized crowning system features are offered as standard to enable you to obtain more precise bending.

Our solutions with less energy consumption, which were developed with our environmentally friendly perspective, help our customers gain competitive advantage by reducing their total operating costs.

### CLOSED LOOP HYDRAULIC SYSTEM

It has a special closed loop hydraulic system. Maintenance requirement is minimal compared to hydraulic machines.

### SERVO MOTOR BACKGAUGE

All motors used in the back rest are servo motors. Therefore, the sheet metal can be positioned with minimum precision.

### REALISTIC 3D MODELLING (ER TOUCH)

The 3D feature of the controller allows the operator to distinguish the pieces to be processed from each other and provides ease of application.

### QUIET OPERATION

With a sound level of 63 db, it is the quietest among sheet metal bending machines.

### LOW ENERGY CONSUMPTION

The special hydraulic system has low energy consumption. It is also environmentally friendly with an average oil consumption of 34.5 litres.

### LOW OPERATING COST

Thanks to its low energy consumption, the operating cost is minimal. Thus, it provides advantages to the its users with high efficiency and low operating costs.

## ■■■ GENERAL SPECIFICATIONS

**STANDARD EQUIPMENT**

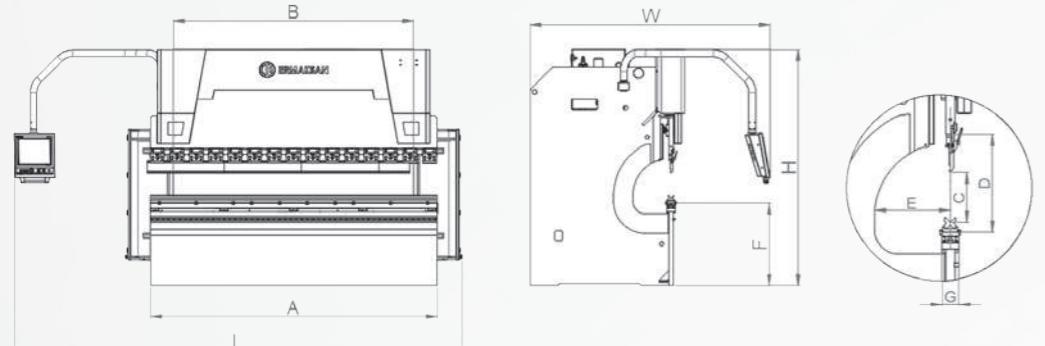

- Steel body with mono bloc welding of ST44 material which is rigid against bending and high tension
- 6 axes (Y1, Y2, X, R, Z1, Z2)
- HOERBIGER hydraulic system
- CNC controlled motorized crowning system
- Top and bottom tools hardened and grinded (835 mm length)
- Easy clamping top tool holder system
- Control units; ER TOUCH 15, DELEM 66T, ER99
- 3D colour graphics display and offline software
- Electrical panel designed and manufactured from SIEMENS electrical and automation products in accordance with the CE regulations
- Backlight protection
- Switch side protection covers
- Y1+Y2 axis synchronization with a tolerance of 0.01 provided by linear scales
- CE compliant foot pedal
- Sliding front support arms with T slot and mm/inch scale
- 410 mm throat depth (110 - 170 tons)
- Leuze front light protection system

**OPTIONAL EQUIPMENT**

- Control units; ER TOUCH PROFESSIONAL, Delem 69T
- 5, 6 axes backgauge options
- AKAS LASER finger protection system
- Laser angle measurement system
- Laser angle measurement system
- Hydraulic and hydro-dynamic crowning systems
- Pneumatic top tool holder system
- Hydraulic top and bottom tool holder systems
- CNC controlled automatic bend sheet support arms (AP3+AP4 axes)
- Automatic sliders lubricating system
- Special throat depths
- Special top and bottom tools
- Cybelec Offline etc. software options
- Tool storage cabinet
- Sliding front support arms with T slot and mm/inch scale
- Led bar

# SPEED BEND PRO

Hydraulic  
Press Brake

### Increase Your Performance!

Production times are the most important profit factor for businesses. Speed Bend Pro series press brakes are manufactured to reduce unit time costs and to become your most important supporting power in your business with their fast and high quality production capability in a competitive environment. The range of motion of the upper beam and the beam-mouth opening have been increased in the Speed Bend Pro series. Therefore, it is extremely easy to obtain deep bends by using longer dies. It is possible to easily remove the bent parts from the front of the machine and to bend the long skirted Z-type parts easily by using high lower dies.

Designed with high safety standards, the machine is equipped with laser finger protection and body protection light curtain. Oil cooler feature is offered as standard in SPEED BEND PRO series of 400 tons and above.

#### STANDARD BACKGAUGE REST AXES

It provides both time and cost savings thanks to its ability to perform complex bending easily with its standard 4-axis back rest (X, R, Z1, Z2) and other accessories that assist bending.

#### LOW OPERATING COST

Provides minimal energy consumption. Cylinders and hydraulic installations that provide easy maintenance are used. Thus, maintenance needs are kept at minimum. This way, the machine offers low operating costs.

#### QUICK PAY OFF

With its speed and versatility, it is a profitable investment and can pay off for itself in a short time.

#### PRECISION BENDING

Thanks to the standard motorized crowning system, the deflection balance can be ideally achieved with the motor. Thus, precise bends are obtained.

#### PRECISION PROGRAMMING

Fast, easy, error-free, and precise programming is possible thanks to the linear rulers produced at high quality standards in special production facilities.

#### SLIDING FRONT SUPPORT ARMS

Sliding front support arms with stopper, scaled according to the metric system, allows more precise and easier bending operations.

# SPEED BEND PRO

## GENERAL SPECIFICATIONS

### STANDARD EQUIPMENT

- Steel body with mono bloc welding of ST44 material which is rigid against bending and high tension
- 6 axes (Y1, Y2, X, R, Z1, Z2)
- HOERBIGER hydraulic system
- CNC controlled motorized crowning system
- Top and bottom tools with machined and hardened parts (835 mm length)
- Easy clamping top tool holder system
- Control units; ER TOUCH 15, DELEM 66T, ER99, CYBELEC MODEVA 19T, ESA S660 W
- 3D graphics color display and offline software
- Electrical panel designed and manufactured from SIEMENS electrical and automation products in accordance with the CE regulations
- Backlight protection
- Switch side protection covers
- Y1+Y2 axis synchronization with a tolerance of 0.01 provided by linear scales
- CE compliant foot pedal
- Sliding front support arms with T slot and mm/inch scale
- 410 mm throat depth (60 - 320 tons)
- Led light enclosures

### OPTIONAL EQUIPMENT

- Control units; ER TOUCH PROFESSIONAL, Delem 69T, CYBELEC MODEVA RA PREMIUM
- LEUZE light protection system
- AKAS LASER finger protection system
- Laser angle measurement system
- Laser angle measurement system
- Hydraulic and hydro-dynamic crowning systems
- Pneumatic top tool holder system
- Hydraulic top and bottom tool holder systems
- CNC controlled automatic bend sheet support arms (AP3+AP4 axes)
- Automatic sliders lubricating system
- Special throat depths (500, 600 and 750 mm and above)
- Special top and bottom tools
- DSP MCS AP photo electric laser front protection
- Tool storage cabinet
- Hydraulic oil cooling and heating systems
- Led bar

Press Brake

### The Perfect Combination of Speed and Power...

Power-Bend Pro Series, which has been redesigned according to the current needs of our users, has reached a unique structure with its electronic and mechanical hardware that offers excellent results in standard, stainless, thin, and thick sheets. Power-Bend Pro Series Press Brakes, which achieve high production speeds by keeping the production costs of your business at a minimum, are among the most preferred models with their user-friendly CNC control panels and low-maintenance hydraulic systems. Motorized crowning system is offered in tonnages in the range of 260-320, and both motorized ridging and oil cooling capability are offered in tonnages of 400 and above. Power-Bend Pro, where design and technology unites; will become an economical and permanent solution for your business in narrow, wide, complex, and precision bending operations, in single or mass productions that require high speed.

#### REMOTE ACCESS

With the remote service support, the problems of customers from all over the world are resolved quickly, providing time and cost savings.

#### TOUCHSCREEN

Models can be viewed realistically on the screen with the 3D feature of the controller. Thus, it provides the operator with the ability to distinguish objects from each other and ease of application.

#### QUICK AND EASY DIE REPLACEMENT

Makinede standart kullanılan promekamlar için ekstra anahtar ihtiyacı duymadan kalıp değiştirilebilmektedir.

#### FRONT SUPPORT ARMS

Sliding front support arms with stoppers that move by means of linear rails and trolleys are your closest assistant.

#### RIGID UPPER BEAM WITH PRECISELY POSITIONED BEARINGS

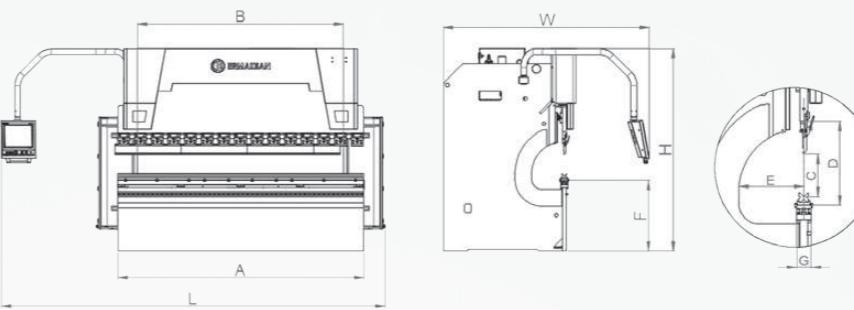

It is possible to obtain precise bending thanks to the rigid upper beam with a bending precision of 0.01 mm on bearings from 12 points./p>

#### EASY MAINTENANCE

It is extremely easy to access the accessories on it with its structure that allows both functionality and aesthetic appearance in design. With low maintenance hydraulic systems, the maintenance times are reduced to a minimum.

# POWER BEND PRO

## GENERAL SPECIFICATIONS

### STANDARD EQUIPMENT

- Sliding front arms that is height-adjustable and with scale
- Handened and grinded top an bottom tools
- Promecam fast tool clamping system
- Control units; ER TOUCH BASIC, DELEM DA-52S, CYBELEC CYBTOUCH 12, ESA S630
- 800 mm strong backgauge with CNC control single-axis
- 410 mm throat depth (60 - 320 tons)
- 2 axes backgauge finger
- Metric and inch scale
- Crowning system in the lower beam (manual crowning system in 3100.../4100-260 and 3100.../4100-320, motorized crowning system in machines over 3100-400 tons) is standard
- Movable foot pedal convenient for single and serial bending in compliance with the CE norm
- Front protection light curtain, side protection doors + switch and rear protection light curtain
- Top beam and cylinder covers are renewed with led light
- Different electrical voltage options according to the country where the machine will be operated

### OPTIONAL EQUIPMENT

- Special stroke and special throat depth options that provide advantage to the user in deep bendings
- Control units; ER TOUCH MASTER, DELEM ER70, DELEM DA-58T, CYBELEC MODEVA PAC, ESA S640, STEPER77
- Optional backgauge stroke added backgauge fingers
- Motorized crowning systems
- Hydraulic oil cooling and heating system
- Segmented top and bottom tools
- Optional table width or bottom die V opening option
- Tools for box or pole bending
- Laser front protection options
- Electric panel, oil tank and controller case can be heated and cooled optionally
- Optional top and bottom tool holder
- Tool storage cabinet
- Automatic slide lubrication system that extends the lifetime of the sliding system
- U-Type dies for thick material bending
- Front support arms with additional movement to eliminate the stretching formed in thin materials
- Special machine production according to sheet length and thickness depending on demand
- AP3/AP4 motorized front sheet support system and parking place for reverse bending
- Control panel and/or electricity panel are mountable to the right side of the machine according to the demand of the customer
- Back sheet support system
- Sheet extraction system
- Pneumatic-finger backgauge system

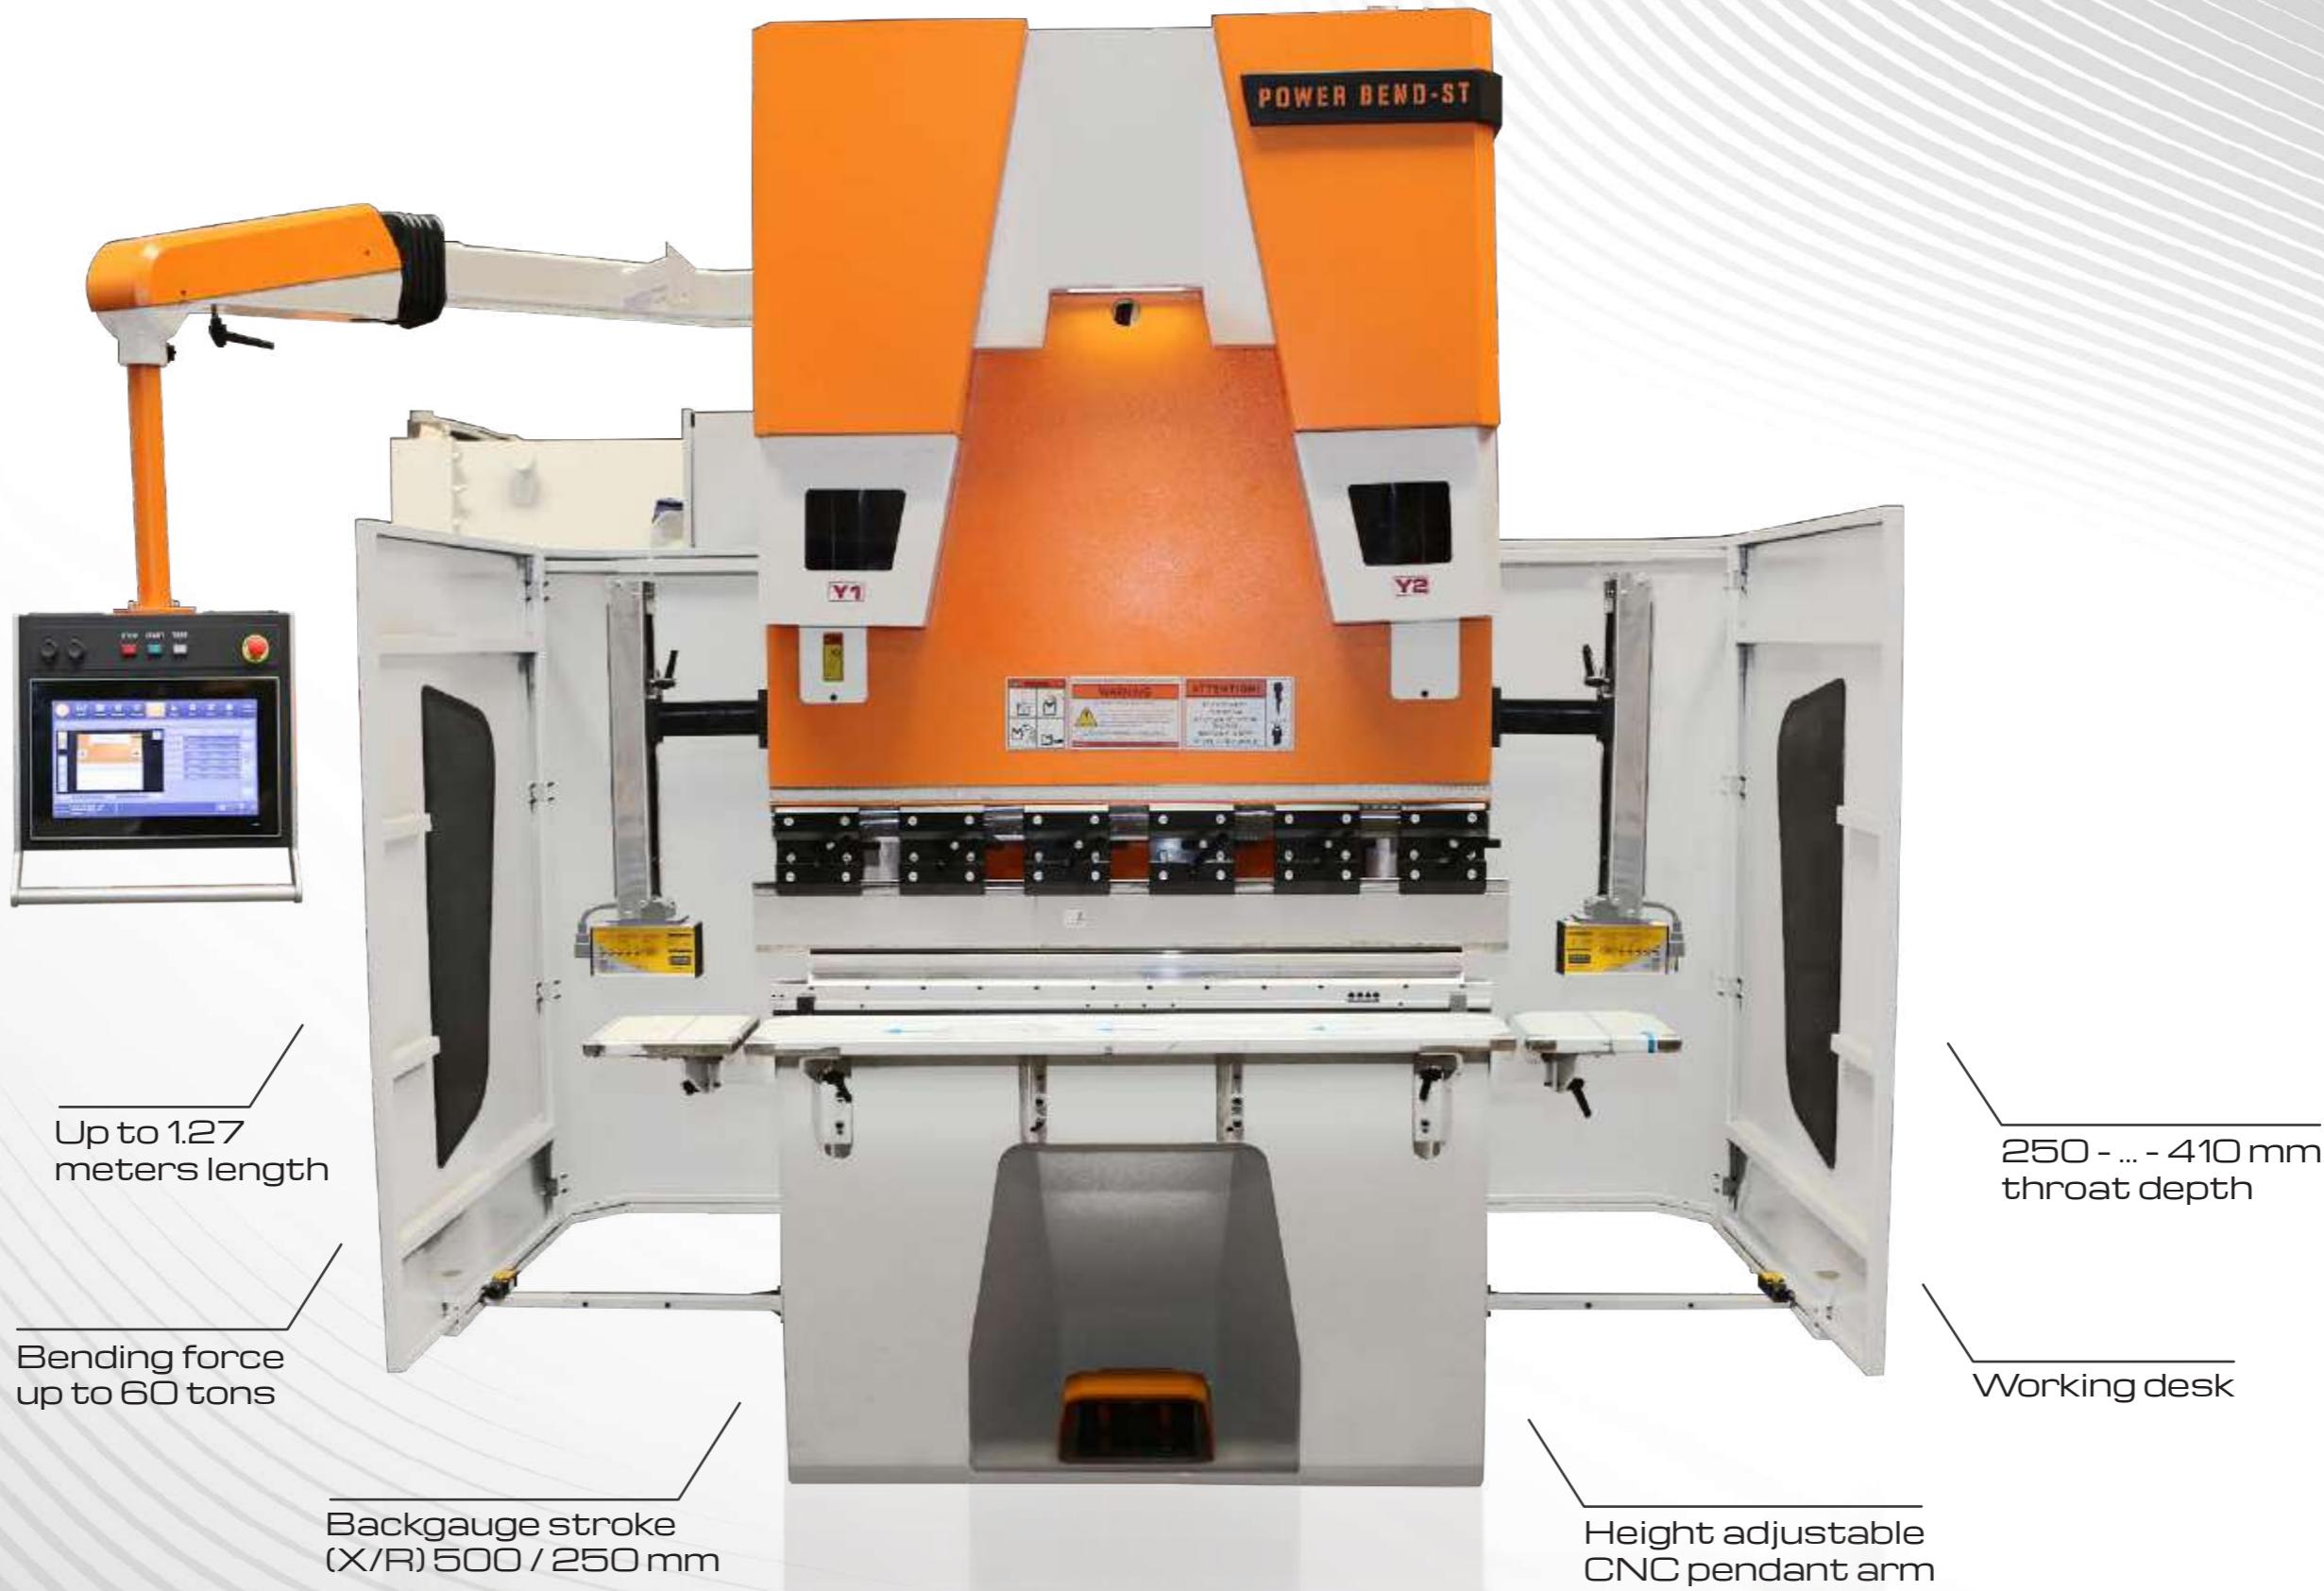

POWERFUL BENDS  
PRECISE PERFORMANCE  
SAFETY MAXIMIZED

# POWER BEND

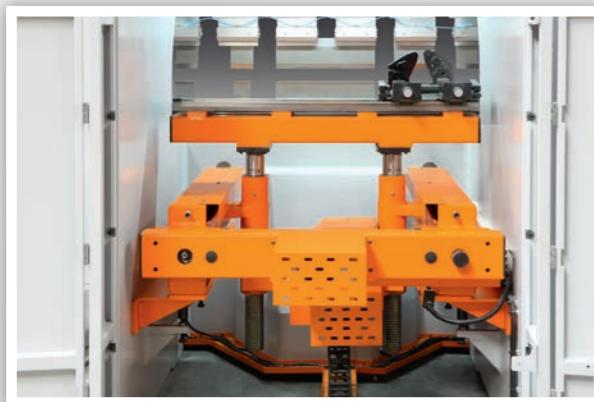

ST

Hydraulic  
Press Brake

### Enjoy Bending from Your Seat !

It is the perfect solution for our customers working with small and thin parts up to 1.27 meters, offering advantages in both cost and working area. Seating area with knee gap, working desk, height adjustable CNC pendant arm with shock absorber and lighting systems have been designed with ergonomics in mind. In addition to the adjustable seat and controller arm, the lighting system in the machine body is also a part of the ergonomic system. Working in dim light all day can cause strain on the eyes, headaches, and mental and muscle fatigue. Therefore, it is aimed to provide a comfortable and ergonomic working environment to the operator, and efficiency in production.

#### FBSS (Faster Bends Safety System)

Serial bending processes without using a foot pedal speeds up your production process and saves you time and money while increasing your productivity.

#### ERGONOMIC DESIGN

Maximum comfort of the operator was considered with the knee space opening to the lower beam, wide working desk, comfortable seat, and lighting system.

#### REMOTE ACCESS

With the remote service support, the problems of customers from all over the world are resolved quickly, providing time and cost savings.

# MICRO BEND

Hydraulic  
Press Brake

**Don't Have Enough Space to Use ?**

Let us offer you Micro-Bend, the most efficient and smallest Hydraulic Press Brake of its class. Standing out with its low investment cost, ergonomic design, and high efficiency; Micro-Bend single axis backgauge has the capacity to bend 5 mm black steel sheet full length with 1 m x 40 tons of press power.

**SIMPLE OPERATION**

It provides the opportunity to perform small, simple bends with maximum efficiency.

**MASS PRODUCTION WITH LOW STROKE**

The low stroke feature minimizes the times without any bending operation. Therefore, it increases the productivity of your business.

**COMPACT MACHINE**

Although it is small, it is a very useful machine with maximum efficiency and many features.

# ECO BEND EXPERT

Hydraulic  
Press Brake

### An Affordable Solution...

While being user-friendly with both standard and optional hardware features, CNC Hydraulic Press Brake Eco-Bend makes your investments profitable with the economic power it adds to your business. Eco-Bend offers its user a CNC control unit with a 2D graphic display and high programming capability as a standard. CNC Hydraulic Press Brake Eco-Bend will boost your business with its low investment cost, high efficiency, while also offering economical solutions.

Contributing to your budget with its low operating cost, it provides long-lasting use thanks to its monoblock body and strong rigid structure.

#### ECONOMY CLASS

It offers a more cost-effective option by reducing the total investment cost without sacrificing from performance.

#### QUICK AND EASY DIE REPLACEMENT

The die can be replaced without the need for an extra key for the standard promecams used in the machine.

#### LOW OPERATING COST

Energy efficient motors are used. Low-maintenance, easy-to-maintain cylinders and hydraulic installations are used. Thus, the operation costs are lowered.

#### QUICK PAY OFF

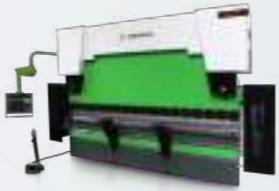

With its low price, it pays off for itself in a short time.

#### 2D TOUCHSCREEN

The controller has a 12" 2D touchscreen.

#### MONOBLOCK BODY

It can be used safely for many years thanks to its monoblock welded body.

● Standard ○ Optional — Not used

## LEUZE MLC510 BACK PROTECTION

The back protection light barrier stops the machine in case an object enters the rear of the machine during operation and ensures safety.

## SIDE CAGE+SWITCH+LEUZE (MLC100)

If the brackets used as front light protection detect an object in the beam movement, they stop the movement of the beam; if the beam is removed, the beam keeps moving at the same speed. However; if the object remains in between, the beam keeps moving at a low (manual) speed.

## SIDE CAGE+SWITCH+AKASII (AUTOMATIC)

AKAS finger protection stops the movement of the upper beam when an object is detected. If the object is moved out of the way, the jaw continues to move. Height adjustment is done manually.

## SIDE CAGE+SWITCH+AKASII (MANUAL)

AKAS finger protection stops the movement of the upper beam when an object is detected. If the object is moved out of the way, the jaw continues its movement. Once calibrated, it automatically adjusts the height when the upper mould is changed.

## SIDE CAGE+SWITCH+DSP AP MCS

DSP MCS AP stops the movement of the upper beam when an object is detected. The beam continues to move if the object is removed.

## SIDE CAGE+SWITCH+LAZER SAFE

The system, which is also used as front finger protection, stops the movement of the upper jaw when it detects any object.

If the object is moved out of the way, the jaw movement continues. If the object continues to stand in the way, the jaw movement continues at a slow speed (manually).

## SIDE CAGE+SWITCH+LASERSAFE IRIS

The system, which is also used as a front finger protection, stops the movement of the upper beam when an object is detected.

If the object is moved out of the way, the jaw movement continues. If the object continues to stand in between, the jaw movement continues at slow speed (manually).

## MOTORIZED SHUTTER DOOR REAR COVER

A rear safety door that can be used with motors and manually, and has aluminium partitions, which are provided in anthracite grey and metallic grey colours.

## REARGUARD+SWITCH

Maximizes your safety thanks to the rear sliding cage and the switch. The windows allow you to check the inside of the machine.

## SLIDING TYPE REAR GUARD

With its cover that can be moved manually in a horizontal direction, It is a rear security protection door that can be optionally installed according to customer request, in both body color and orange color.

## LASER BEND LINE - B-LIGHT 01-02-03

This is a system utilized for bending without the use of backgauge with the help of laser beam, and that allows the bending axis to be clearly visible.

## KEBA DIGITAL ANGLE GAUGE

With KEBA angle measuring systems, complex bends can be performed extremely easily and with maximum accuracy. The first advantage of this system is allowing the bending of complex shapes easily and accurately within view, especially Z-bends or narrow parts. Complete quality control is possible with this system without any additional time and with maximum accuracy and reproducibility.

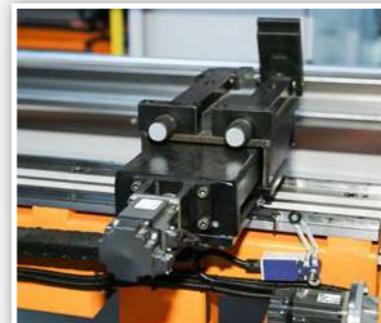

## MITUTOYO UNIVERSAL ANGLE GAUGE

- Can make measurements more accurately with it's sensitive adjustment.
- Can easily read measurements through by a clear screen.
- Can easily transfer your measurement data to the controller with it's bluetooth feature and gives a correction to the value for get more accurate results.
- When not active, it will turn itself off after 10 minutes and saves up to 200 hours of battery.

## X5 BACKGAUGE TONGUE GROUP

X5 servo motorised back gauge tongue desired positioning accuracy of 0.05 mm according to geometry. The back gauge allows you to achieve precise bends. Backgauge one of the stop moves ±100 mm itself to make conical bending.

## PNEUMATIC REAR SUPPORTS

This is the latch group that is additionally mounted for easy bending in the machine and can also operate pneumatically apart from the backgauge.

## SINGLE-AXIS BACKGAUGE

Backgauge single-axis (X) asynchronous motor and 0.05 mm positioning accuracy according to the desired geometry

## 2-AXIS BACKGAUGE

Backgauge with 2-axis (X, R) servo motor allows you to obtain precise bending of the backgauge with 0.05 mm positioning accuracy according to the desired geometry.

## 4-AXIS BACKGAUGE

Backgauge with 4-axis (X, R, Z1, Z2) servo motor allows you to obtain precise bending of the backgauge with 0.05 mm positioning accuracy according to the desired geometry.

## 5-AXIS BACKGAUGE

5 axis (X1, X2, R, Z1, Z2) servo motorised back gauge desired positioning accuracy of 0.05 mm according to geometry. The articulated type back gauge allows you to obtain precise bends. R, Z1, Z2 by angular movement of the gauge X1, X2 stroke used for conical bending.

## 6-AXIS BACKGAUGE ATF TYPE

ATF type backgauge system with 6-axis servo motor is automatically positioned for optimum bending results.

X1, X2, R1, R2, Z1, Z2 - 6 Axis ATF type back gauge system is an option that offers fast and precise work for maximum productivity.

## STANDARD CONTROLLER ARM

This is the standard equipment in which the CNC controller, which is required for the machine to work, is mounted and allows the controller to move to the front or back of the machine when required.

## HEIGHT ADJUSTABLE CNC PENDANT ARM

The height-adjustable CNC pendant arm with shock absorber stands out with its modern design and functional features.

This function is very practical when the machine is used by more than one operator and the height adjustment of the controller needs to be changed frequently. The controller can be easily moved up and down, left and right, forwards and backwards, providing a comfortable working environment for the operator.

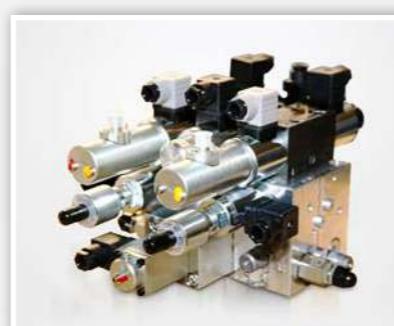

## ERGONOMIC CONTROLLER ARM

It is a control panel arm type that allows you to easily move left and right, back and forth, in order to be more compatible with the operator working on the machine.

## HAWE HYDRAULIC SYSTEM

This system ensures that sufficient amount of oil required for the main rollers, pressing rollers, and feeler adjustment rollers circulates in the system at an accurate pressure.

## HAWE EPRAX HYDRAULIC SYSTEM

It has a special closed circuit hydraulic system for the EVO III hybrid press brake series. It requires minimum maintenance compared to hydraulic machines.

## FRONT SLIDING ARMS

Sliding front support arms with stopper, metric system scales and height adjustment feature allows more precise and easier bending operations.

## L TYPE SLIDING FRONT SUPPORT ARM

Sliding front support arms with height adjustment stoppers, sized in the metric system, allow you to make your bending processes more precise and easier.

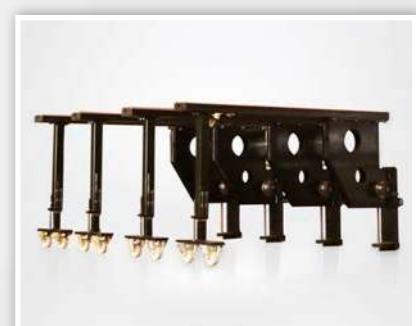

## U TYPE SLIDING FRONT SUPPORT ARM

It is the front arm body of all our machines (except Eco-Bend Expert), which is created using a light curtain and used for front security.

## WIDE TYPE FRONT SLIDING ARM

They are optional foot type front arms used in machines with high sheet width and special bending.

## AP3-AP4 FRONT SUPPORT ARMS SYSTEM

The sheet support system used where the plinth rates of the elastic fine sheets to be bended are bigger.

This system prevents deformation of the bent sheet due to the flexing of the skirt share. It also provides a comfortable and easy bending by lifting the sheet from the bottom by following the bending path.

## DOUBLE FOOT PEDAL

Double foot control pedal designed to ensure easy bending.

## TOOL STORAGE CABINET

This is a cabinet manufactured by Ermaksan to protect the upper and lower dies used in our machine from external impact, and to keep them clean.

## ROLLERI TOOL CABINET

This is a cabinet manufactured by Rolleri to protect the upper and lower dies in our machine from external impact, and to keep them clean.

## SHEET EXTRACTION SYSTEM

This is the system that helps the bent products to be removed from the table of the press brake and transferred to the next stage.

## RULER ON TOP BEAM

You can get precise results with Y1+Y2 axis synchronization with a tolerance of 0.01 provided by linear rulers.

## MOTORISED CROWNING SYSTEM

Thanks to the CNC-controlled motorized crowning system, the ideal deflection balance can be achieved with the motor. Thus, it ensures that every point of the bent part is at an equal bending angle.

## MANUAL CROWNING SYSTEM

The ideal deflection balance can be achieved with the manual crowning system that operates by manually turning the hand wheel. Thus, it ensures that every point of the bent part is at an equal bending angle.

## HYDRO-DYN CROWNING SYSTEM

Thanks to the CNC-controlled hydro-dynamic crowning system, it is possible to straighten with multiple hydraulic cylinders and a special measuring device (strain gauge), and thus achieve the ideal deflection balance by means of the force applied to the special lower beam. Thus, it ensures that every point of the bent part is at an equal bending angle.

## HYDRO-MECHANICAL RIDGING

Thanks to the CNC-controlled hydro-mechanical crowning system, it is possible to achieve the ideal deflection balance with a hydraulic cylinder. Thus, it ensures that every point of the bent part is at an equal bending angle.

## HYDRAULIC CROWNING SYSTEM

Thanks to the CNC-controlled hydraulic crowning system, with multiple hydraulic cylinders, it is possible to achieve the ideal deflection balance by means of the force applied to the special lower beam. Thus, it ensures that every point of the bent part is at an equal bending angle.

## SMART FEATURES

## FUNCTIONS

"Smart features help manufacturers minimize downtime, reduce waste, improve quality, increase output and optimize production processes. Thus helping to increase productivity"

### WILA SMART TOOL LOCATOR

This system determines the order of use of the partial dies, which are mounted on the upper beam in full length, and attached to the top tool holder, by means of laser beam.

### BARCODE READER

Facilitates the operator's intensive and complex work processes and prevents errors.

In order to facilitate work processes and prevent errors, the programme is loaded automatically by reading the code from the sheet or anywhere else. Thus, your production times are reduced and your productivity increases.

### START - STOP (+SOFT STARTER)

This is the STAR - TRIANGLE motor speed change that we use as an option. Ensures safer and easier speed change for the motor.

### LED BAR GUIDING SYSTEM

Shows the location of the bent pieces and bending stations with coloured LED bars.

### DATA-M LASER PROTRACTOR

Developed by Data M Engineering, it is a powerful solution for measuring bending angles in press brakes.

This is the semi-automatic laser-based bending angle measuring device enables the user to determine the exact bending angle for press brakes by a built-in semiconductor laser with line optics and the 1/3" CMOS-camera together with strain gauges – and it works contactlessly.

### IRIS PLUS LASER PROTRACTOR

Automatic angle measurement and automatic correction of bending angle

The IRIS Plus consists of a laser transmitter and receiver set mounted on the top beam of the press brake. The receiver unit includes a high-speed digital camera and image data processing system. This important device successfully performs real-time angle measurement and correction for the most demanding applications.

# POWER BEND

## FALCON

Hydraulic  
Press Brake

## Stronger, Faster And Deeper Bends...

Power-Bend Falcon Series machines redesigned based on users preferences to become a unique machine with its individual electronic and mechanical features. Power-Bend Falcon Series are among the highest rated machines which will help you increase your productivity and keep costs at minimum level with its user friendly CNC controller and low cost hydraulic maintenance.

New Power-Bend Falcon is exactly what you need for your accurate single, or complicated multiple bend productions.

### MOTORIZED CROWNING SYSTEM

Thanks to the motorized crowning offered as a standard, the deflection balance is made with the motor in the most ideal way, allowing you to obtain more precise bending results.

### FINGER PROTECTION LASER SAFETY

Laser safety units that is produced specially for press brakes and is the leader among safety systems. Laser safe keeps the operator's safety at the top level.

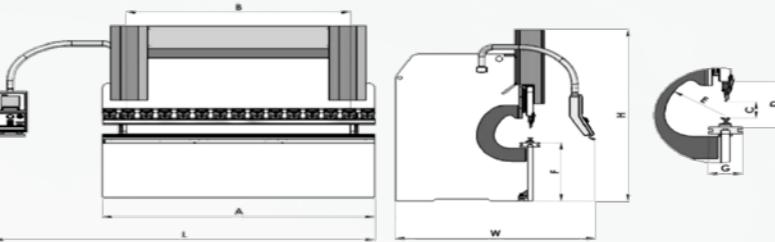

### BACKGAUGE SYSTEM

Power-Bend Falcon offers you 2 Axis (X and R) motorized back gauge system as standard. X and R Axis movements are precise by accurate servo motors mounted on back gauge system.

# POWER BEND FALCON

# " We know your sensitivity "

The machines we produce using high technology with our experience of more than half a century have been contributing to precise and efficient production all over the world for years. Along with the dynamics of digital transformation, we offer customized solutions to our customers, make production more flexible and efficient, and offer the most cost-effective solutions. Thus, we are proud of contributing to smart production processes in the fourth industrial revolution.

**"We are with you in your digital transformation journey"**

#### ALL INTEGRATED

Integrate your machine data with your MES and ERP applications.

#### ALL THE DATA

Record your machine historic performance data. Track your machine Job and Operator performance.

#### ALL THE MACHINES

Enable all your production line to be monitored. Retrofit your existing machines to our Industry 4.0 platform.

#### ANY WHERE

Monitor and track machine performance over the flexible easy to use WEB interface from any where

#### ANY TIME

Reach your machine performance data any time you like.

#### EFFICIENCY GRAPH OF THE MACHINE FOR THE LAST WEEK

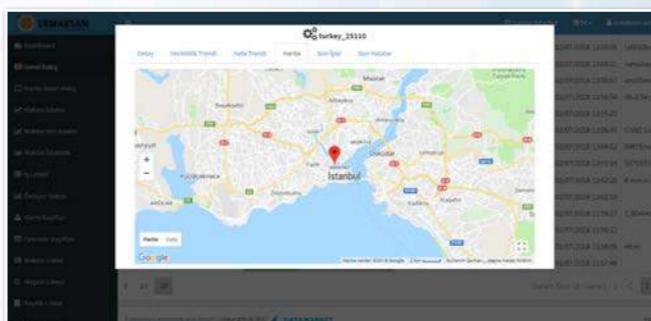

Generates a trend graph by compiling the operational information of the machine. Operation performance for the previous week may be monitored.

#### OEE VALUES OF THE MACHINE

Collects all the information during the stand-by, production and preparation processes to generate a general productivity chart.

#### MACHINE MONITORING SCREEN

You may monitor your machines in different fields from a single screen.

#### DETAILED INFORMATION OF THE LAST WORK COMPLETED

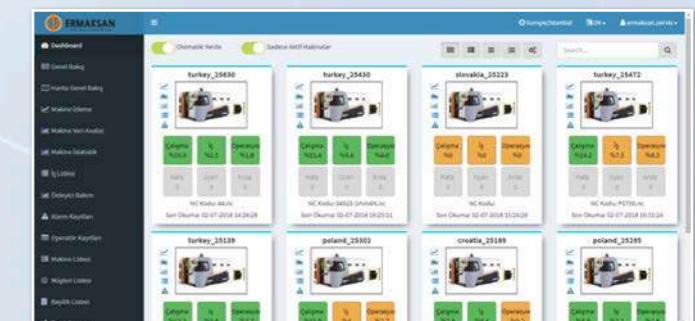

Indicates all the details of the work done, and information such as how long it did take the operator to complete which work and in what way.

#### EQUIPMENT DATA

It shows the instantaneous data of the operational elements of the machines as trend graph.

#### STATUS OF THE MACHINES

This provides the lists of the operational and non-operational machines on the field and the summary of their operation.

# HEAVY DUTY

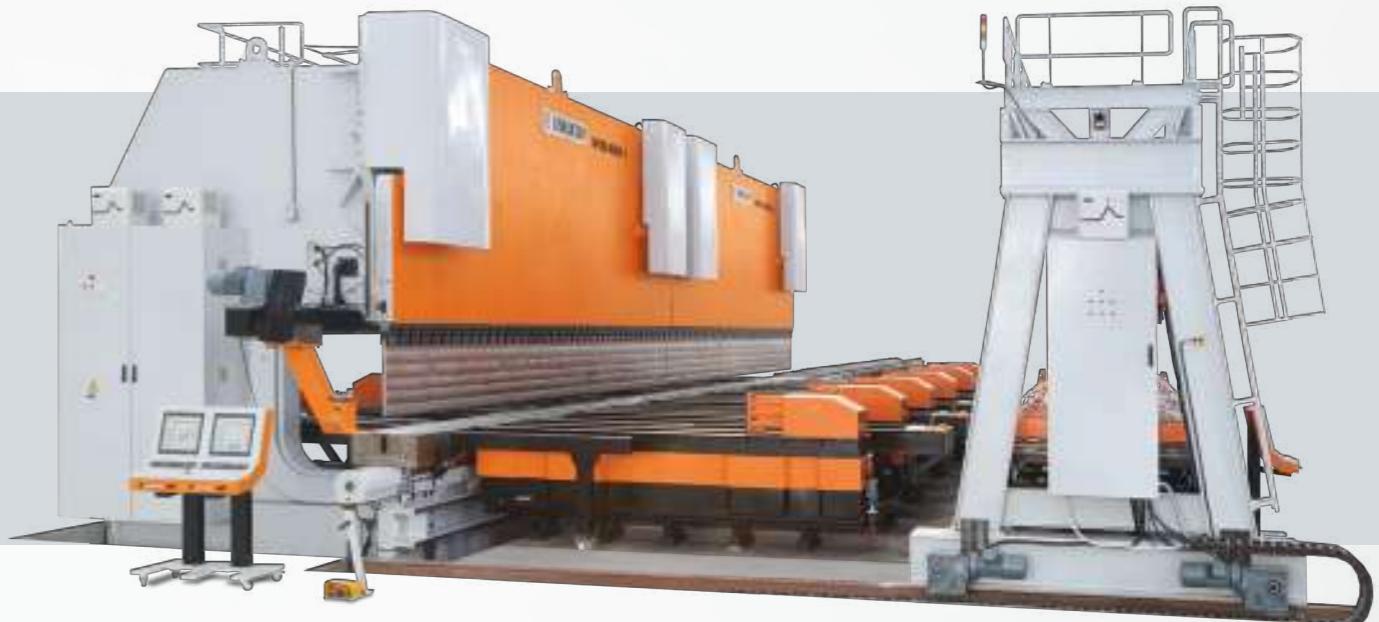

Hydraulic  
Press Brake

## The Right Choice for High Tonnage Bends

High tonnage press brakes, designed and produced under the brand of Ermaksan, are manufactured in different sizes and tonnages to serve the different needs of the customer. High Tonnage Press Brakes allow you to work at full capacity and eliminate time losses of your business. High tonnage press brakes, which provide high performance in the harshest conditions with their durability, allow use in the most efficient way in your tough bending operations. Ermaksan's special press brakes are used in a wide range of industries such as heavy machinery industry, transportation, shipbuilding, wind turbines, power plants, aviation and defence industry, lighting pole production all over the world.

With tandem press brakes, you can make your bends in full length or you can meet your bending needs with its flexible structure that allows you to bend your short-length materials by using them separately. Thus, by eliminating your losses in terms of work and time, you will ensure that your production capacity remains at a high level.

### FULLY AUTOMATED SOLUTIONS

The sheet metal is automatically taken into the bending process and is automatically removed after bending. In addition, CNC-controlled special pneumatic sheet waving and thickness measurement processes are performed with a fully automated vacuum lifting system.

### ADVANCED ENGINEERING STUDIES

With our experience of more than half a century and our strong engineer staff, we determine the machine you need and technical requirements with scientific methods and offer the most appropriate solution to you.

### TANDEM / TRIDEM SOLUTIONS

With Tandem / Tridem solutions that provide flexibility in production, you can make your bends in full length or you can twist your short length materials by using them separately.

"We produce the most suitable solutions for your needs with our advanced engineering approaches"

## CONSULTANCY

With our competent and friendly staff, we provide guidance to our customers in their journey from pre-sales to after-sales, from proposing the right solution to using the offered solution effectively and efficiently. Your business needs, solutions that will meet the highest efficiency with the most appropriate budget are determined with the advanced engineering studies on the customized machinery and equipment. We will present you an offer after the most suitable model for you is determined.

Promising to offer you the most suitable solutions before sales, Ermaksan also promises to provide you the highest quality support service in sales, installation, training, and after-sales processes.
